

Why You Need Flare Technologies

DIY or “Do It Yourself” eLearning development tools have been both a blessing and a bane to the eLearning industry. These tools make possible rapid content development where anyone with essentially word processing skills can develop eLearning courseware. Unfortunately, these tools do not guarantee great content and are severely restricted in their capability. The result has been the development of scores of boring, dull, content that all looks alike. Knowledge and skill retention is extremely low and most taking the modules could care less.

Flare Technologies has been developing high-performance, exciting, custom learning modules and technology from scratch for more than 14 years. With a unique emphasis on lightweight courseware, Flare Technologies seeks to analyze how best to develop content that is pleasing and fun to absorb while specifically targeting improved knowledge and skill retention. Think visually pleasing 2D and 3D interaction with great audio. Let us add a splash of colour to your next eLearning or LMS project and make learning fun!

About Flare:

At it's heart, Flare Technologies is a high-performance computer and learning technology company. A variety of development and consulting services are offered including:

- high-performance, proprietary eLearning
- high-performance, proprietary .NET-based LMS development
- LMS / CMS consulting and development
- .NET web and desktop application development
- IT project management
- software localization
- ISO 9001 and 17100 project management
- storyboarding and video production
- audio production

Flare Technologies has worked in the following industries: automotive, heavy equipment, healthcare, military, translation, and more.
